

Welcome to Wadsworth Pediatrics

We are excited that you have chosen Wadsworth Pediatrics for your child's medical care. Your comfort and convenience are our priority, and we strive to make every visit to our office a positive experience. To help you get acquainted with our office and first visit procedures, please read the following:

Insurance

It is always a good idea to acquaint yourself with your insurance plan. There are so many insurers, each with a myriad of plans, that we at Wadsworth Pediatrics cannot keep up with the specifics of each policy. Therefore, please make sure of the following:

- The providers at Wadsworth Pediatrics are included in/covered under your specific plan.
- Your child has been added to your plan. Most insurers require that they receive notification of a new addition within 30 days. Should you fail to add your child within the proper time frame, you may be stuck with some unwanted medical bills.
- That you familiarize yourself with your plan's specifics regarding copays, well child/preventative medicine coverage (including immunizations), deductibles, and maximum covered amounts.

Our Mission

Our practice is working together to build life-long relationships between our staff and our patients by consistently providing our patients with compassion, excellence and value. To fulfill this mission, we are committed to:

- Improving the lives of the children we serve by providing quality care in a child-centered environment.
- Listening to our young patients and their families who we are privileged to serve.
- Guiding our patients along a path of optimal health and wellness.
- Continually pursuing excellence at all levels through continuing education.

Vaccine Philosophy and Policy

Our practice believes that all children should receive the recommended vaccines according to the guidelines provided by the AAP and CDC. Vaccines are safe and effective in preventing diseases and health complications in children and young adults. Regular vaccinations help children ward off infections, and are administered as one of the safest and best methods of disease prevention. We are happy to discuss any concerns about vaccines at your child's next visit. Please be aware, however, that should you opt to forego or delay routine immunizations; we will ask you to find another provider for your child.
